# Construction Features

## Direct Drive

- Cast aluminum, adjustable pitch airfoil blades, with cast-in high strength steel bolts are attached to a cast aluminum hub having a tapered bushing and streamlined hub cover.
- The inner shell motor mounting and guide vanes are integrally welded to the outer housing providing a substantial all-steel weldment.
- The housing flanges are designed to support the unit in a duct by using matching companion flanges. Various other common mounting arrangements are available as optional accessories.
- Motor leads are extended through liquid-tight conduit to the outside of the housing for connection to power supply.
- Grease lines from the motor bearings are extended to the outside where required by motor design.
- Standard motors are satisfactory for operating up to 105°F. Special motors can be furnished to extend the operating temperature range to 212°F. Each of these high temperature applications must be considered separately in order to choose the most economical motor insulation for a given application. Aerovent will furnish these fans to meet your specifications.

*Shown with support legs (optional)*

## Belt Driven

- Cast aluminum, adjustable pitch airfoil blades, with cast-in high strength steel bolts are attached to a cast aluminum hub having a tapered bushing and streamlined hub cover. The standard blade angle of 34° was chosen for development of the rating tables to produce optimum performance.
- The inner shell houses standard pillow block bearings that have grease lines extended to the outside of the housing. The guide vanes and belt tube form a rugged all-steel weldment.
- The housing flanges are designed to support the unit in a duct by using matching companion flanges. Various other common mounting arrangements are available as optional accessories.
- Adjustable drive sheaves are standard when motor is 5 HP or smaller. Adjustable drives for larger horsepowers are optional.
- Fan housings can be constructed of aluminum, stainless steel, or protected with a wide variety of coatings including hot dip galvanizing.
- A belt guard is standard to protect personnel from the moving drive parts.

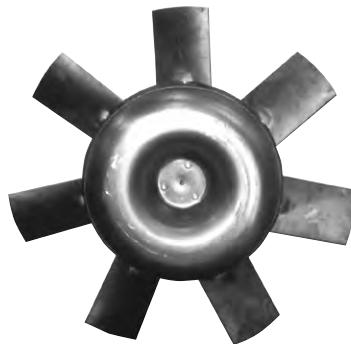

# Propeller Design

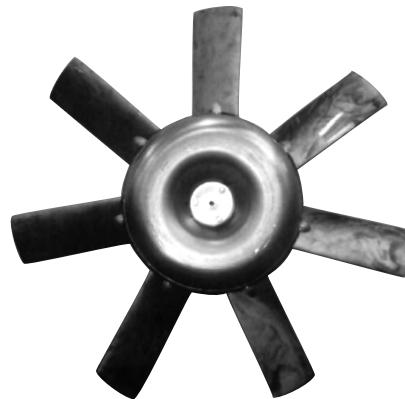

## Adjustable Pitch

The Type W vaneaxial, adjustable pitch propeller is available in Design 1, sizes 18 through 43, and in Design 3, sizes 48 through 84, for direct drive fans. For belt-driven fans, Design 3 is used on all sizes. The seven adjustable cast-aluminum airfoil blades are held in place by a high strength, specially designed steel bolt cast into the blade and threaded into the hub. It is locked by one setscrew. There is a scale at the base of the blade which indicates the blade position in degrees, and this is correlated with the performance tables.

This design has many practical advantages. It is easily adjustable, requiring no special tools. The angle setting cannot be thrown off when the locking setscrews are tightened. By threading the retainer bolt into the hub, prestressing of the

Design 1

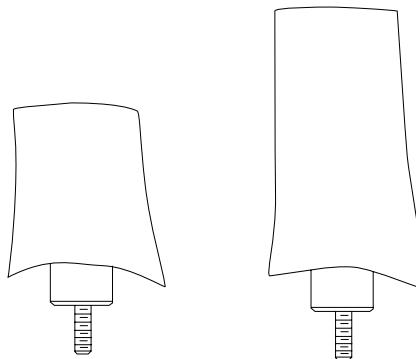

Design 3

## Blade Design

Two basic blade designs were chosen for the performances tabulated in this catalog. Blade Design 1 has the larger hub and is used in the direct drive fan models to 43" in diameter. The larger hub diameter allows for drive motors throughout a wide range of horsepowers.

Blade Design 3 has a smaller hub. This is used in the 48" and larger direct drive models because of the advantage in weight reduction while still having sufficient space for the motor to be within the diameter of the hub.

Blade Design 3 is used on all belt-driven models because the larger air passage area has some compensation value for the restriction created by the belt tube, resulting in a broader optimum performance range.

Design 1

Design 3

## Guide Vanes

The vaneaxial propeller is especially designed to work with guide vanes, and the overall mechanical efficiency is usually higher than the other axial flow fans. The function of the

holding device is completely avoided. The use of steel allows for a smaller hub socket and, therefore, a stronger hub rim.

The propeller is available with angle settings in increments of one degree from 18 to 42 degrees, making it possible to interpolate between blade angles shown in the performance tables. For the direct drive vaneaxial assembly, the catalog number indicates the blade angle at  $\frac{3}{4}$  of the propeller radius. Propeller Design 1 has a 57.5% hub while propeller Design 3 has a 41.5% hub. The propeller is mounted to the shaft with a Browning split tapered bushing (spinner cap). The bushing mounting bolts also secure the hub cover which makes removal of the propeller an easy single-step procedure.

guide vanes is to improve the efficiency and the pressure characteristics by converting rotational energy at the propeller discharge into useful work.

# Fan Selection

Present methods of testing fans provide accurate, dependable performance data; however, information available for designing systems is necessarily based on averages. Therefore, a certain amount of "rounding off" of design figures is a reasonable approach and will produce a practical air handling system design. Most engineers prefer the static pressure or friction loss method of calculation.

The fan is usually located somewhere within the system; therefore, it is only necessary to figure the entrance loss and the duct friction loss, then select the fan directly from the tables. This method assumes that the duct size from the outlet of the fan to where the air is released to atmosphere is essentially the same as the diameter of the fan.

- If the fan is at the beginning of the duct, then an inlet bell should be used and no entrance loss is calculated.
- If the fan is at the end of the duct, then the entrance loss and duct friction are calculated and this is the fan static pressure.
- If an outlet cone is used and there is a static regain, the regain can be added to the static pressure. For information on how to calculate the static pressure regain, see outlet cones in the accessory section.

Some systems are designed using total pressure (TP). Using the following formulas, the total pressure can be calculated.

## Fan Selection Formulas

$VP = \left( \frac{CFM}{AREA \times 4005} \right)^2$	<b>NOTE:</b> This formula is used only for density at standard air, 0.075 lbs./ft <sup>3</sup> , 70°F and sea level.	Where: VP = Velocity pressure, Iwg SP = Static pressure, Iwg TP = Total pressure, Iwg OV = Fan outlet velocity, Fpm AREA = Fan outlet area, ft <sup>2</sup>
$VP = \left( \frac{CFM}{AREA \times 1096.7} \right)^2 \times \text{Density in lbs.per ft}^3$	<b>NOTE:</b> This formula is used when density is other than standard.	
TP = VP + SP		
OV = $\left( \frac{CFM}{AREA} \right)$		

# Motor Selection

Motors furnished on direct drive and belt driven fans standardly have a T-frame, 1.15 service factor, and are good for applications up to 105°F. Many enclosures are available such as open drip-proof, totally enclosed fan cooled and explosion proof.

For direct drive fans, motors have an increased service factor due to the high air velocity over the motor. However, it is good practice when selecting motor horsepower (MHP) that the required brake horsepower (BHP) not exceed MHP x 1.10. If the required BHP exceeds MHP x 1.10, the next higher MHP should be selected.

**Example A:** If the required fan BHP is 10.2, first check a 10 HP motor. Since 10 HP x 1.10 (= 11.0) is greater than 10.2, then a 10 HP motor could be used.

**Example B:** If the required fan BHP is 11.1, first check a 10 HP motor. Since 10 HP x 1.10 (= 11.0) is less than 11.1, then the next higher horsepower should be selected, a 15 HP.

For belt driven fans, open drip-proof motors can be safely loaded within the service factor (i.e., MHP x 1.10). However, totally enclosed motors should be selected so the required brake horsepower is within the nominal motor horsepower rating (i.e., BHP < MHP).

# Accessories

## Bolted Inspection Door

The bolted inspection door (not shown) allows limited visual access to inspect the internal parts of the fan. If access for cleaning is required use the "Propeller Access Section," "Swing-out Construction" or "Clamshell Construction" accessory.

## Propeller Access Section

The propeller access section is a short duct section that bolts to the fan inlet or outlet and includes a hinged inspection door. Half the access section can be removed or the hinged inspection door can be opened to permit inspection or cleaning of the fan propeller.

## Swing-out Construction

Swing-out construction is available for either direct drive or belt driven fans. It allows the entire fan assembly to swing out from the existing ductwork for easy cleaning and servicing of the internal fan parts. This arrangement is available for fan sizes 48" and smaller. Refer to Aerovent's Easy Access Capabilities flyer for more information.

## Clamshell Construction

Clamshell construction is available for belt driven fans only and provides access to the fan propeller for cleaning and to the bearings for maintenance. Available in all sizes 12" through 60".

## Support Legs

Support legs are available for standard platform or floor mounting. The support legs are bolted to the inlet and outlet flange.

## Horizontal Ceiling Clips

## Vertical Mounting Clips

Clips are recommended to permit easy installation and when using vibration isolators. Horizontal ceiling clips are welded to the fan housing.

Vertical mounting clips can be welded to the fan housing in most cases or they are welded to the "Vertical Support Section."

## Vertical Support Section

The vertical support section is a separate duct section bolted to the fan inlet or outlet and used when the vertical mounting clips cannot be welded to the fan.

## Vibration Isolators

Rubber-in-shear and spring type isolators are available for floor or ceiling mounting, as follows:

**RIS Floor** — Rubber-in shear, for floor mounting

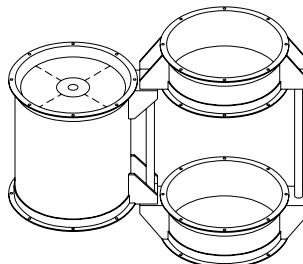

**RIS Ceiling** — Rubber-in-shear, for ceiling mounting

**Spring Floor** — Spring type, for floor mounting

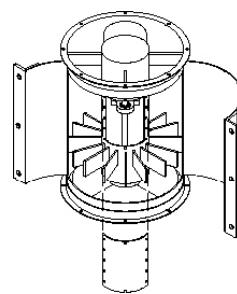

**Spring Ceiling** — Spring type, for ceiling mounting

## Companion Flanges

Companion flanges are rolled angle rings that match the fan inlet and outlet flanges to provide easy attachment for slip duct connections.

Companion Flange

Inlet/Outlet Guard

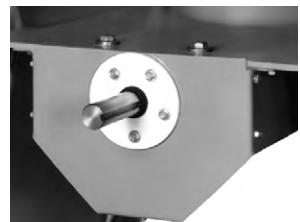

## OSHA Inlet and Outlet Guards

Inlet and outlet guards are offered to protect personnel from the moving parts. Recommended for use when no ductwork is attached to the inlet and/or outlet. Fan sizes 12" through 72" are supplied with spiral wire type PMS guards and the 84" is supplied with a wire mesh Type WM.

## Curb Base (not shown)

Curb bases are designed for mounting vertical fans on roof curbs. Using a stack cap and curb base on the Type W vane-axial fan converts this unit into a roof ventilator. As an option, stack caps and curb bases can be furnished with protective coatings or special metals for handling corrosive fumes.

## Inlet Bell

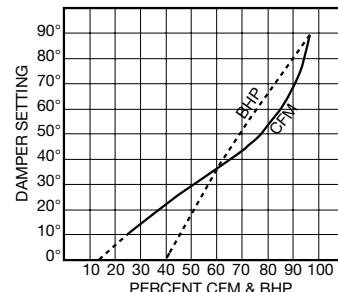

An inlet bell is recommended on the inlet side of the fan to minimize entrance losses for installations where the fan inlet is not attached to a duct system.

## Inlet Vane Damper

The inlet vane damper controls air volume while reducing horsepower. This is accomplished by imparting a swirl to the air in the direction of rotation of the propeller. The graph at right indicates the angle of the damper setting related to the reduction of air volume and horsepower.

*Inlet Vane Damper*

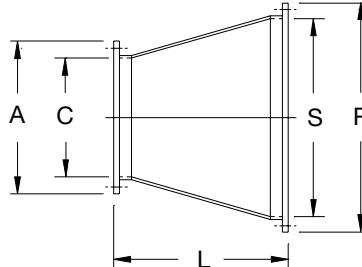

## Inlet and Outlet Cones

Inlet and outlet cones offer a round-to-round transition from the fan inlet and/or outlet to the specific duct diameter of the system.

If a standard outlet cone is used, the static pressure regain can be added to the fan static pressure. The approximate additional static pressure capability is shown in the following chart. Add the amount shown to the fan static pressure and then enter the performance tables to select the fan.

## Spark Resistant Construction

Belt driven fans can be furnished with spark resistant construction.

AMCA Type A spark resistant construction includes an all aluminum fan housing and propeller with an AMPCO-45 fan shaft, Monel hardware and shaft seal.

AMCA Type B and C spark resistant construction includes an aluminum propeller with an aluminum shaft closure plate and shaft seal.

**Note on direct drive spark resistant construction:** Reference standard 99-0401-86 "Classification for Spark Resistant Construction." Because some ordinances prohibit the use of a fan with a motor located in the airstream, even though it would be explosion proof, and because there is some debate as to whether an explosion proof motor meets the intent of Note 1, of the above standard, we cannot say that a direct drive fan conforms to Type B spark resistant construction.

# Performance Data – Direct Drive

## Direct Drive Vaneaxial Type W

Rating tables are arranged to present the performance data in its most useful form, listing the fan speed, motor horsepower and CFM against the static pressure. Also shown is the actual operating brake horsepower at each listed point of static pressure. Indicated within the catalog number is the angle setting of the blade. (A detailed example of the catalog numbering system is shown at right.) In-between performances can be accurately interpolated from the performance tables. You may also refer to your Aerovent representative or the Aerovent Fan Selector Program. Angle settings can be specified when the fan is ordered, and the blades will be factory set prior to shipment.

With the adjustable design, the blade angle can be changed in the field and settings correlated directly with the rating table.

At angle settings above 26 degrees, the performance curve has a reversal; therefore, performances listed in the rating tables do not extend beyond a preselected point on the curve which is 5% below the peak performance. If it is desirable to avoid the possibility of accidental operation beyond this peak point because of unknown design conditions, performances should be chosen with angle settings between 18 and 26 degrees.

### Catalog Numbering System

To identify a specific fan for ordering or engineering specifications, it is necessary to show the complete information listed in the tables below under catalog number. All performance data is available in curve form upon request.

# Performance Data – Belt Driven

## Belt Driven Vaneaxial Type W

Ratings for belt driven Type W fans are presented in the same form as the direct drive fans. The blade angle is 34°. This angle was chosen to give optimum overall performance. These fans can be built having other blade angles to meet special design requirements, but it would be impractical to represent in table form all of this information. Therefore, special performance requirements in this regard can be referred to your Aerovent representative or the Aerovent Fan Selector® Program. It should be understood that performances in the belt driven tables cannot be correlated with the performances in the direct drive tables even at the same angle setting. This is because there are friction losses in the belt drive and bearings, and also a disturbance in the airstream due to the belt housing. Both of these elements of construction tend to reduce the overall fan efficiency by creating losses. The horsepower shown in the rating table includes these losses and lists, therefore, the actual power that must be delivered by the motor.

### Catalog Numbering System

To identify a specific fan for ordering or engineering specifications, it is necessary to show the complete information listed in the tables below under catalog number. All performance data is available in curve form upon request.

# Typical Specifications

## Direct Drive Type "W" Vaneaxial Fans

Vaneaxial fans, where indicated on drawings and schedules, shall be Direct Drive Type W as manufactured by Aerovent, Minneapolis, Minnesota and shall be of the size and capacity as indicated in the fan schedule. Type W vaneaxial fans shall be rated based on tests and procedures performed in accordance with AMCA Publication 211 and shall comply with the requirements of the AMCA Certified Ratings Program. The Type W fans shall be guaranteed by the manufacturer to deliver at the rated published performance levels. In addition, each unit shall be factory run tested prior to shipment.

**CONSTRUCTION** — All fan housings shall have heavy-gauge steel, continuously welded seam construction. Flanges on sizes 18" through 84" shall be integrally rolled from the fan housing. Flanges on all sizes of aluminum construction shall be angle ring construction. Flanges shall be designed to ensure housing concentricity, housing strength and permit duct mounting. Guide vanes shall be integrally welded with the outer housing and shall be designed to provide for maximum efficiency and pressure capabilities. Fan shall be constructed of the following optional metal — Aluminum, Stainless Steel 304, Stainless Steel 316.

**PROPELLER** — The propeller shall be of SC64D cast aluminum with adjustable blades that are attached to a SC64D cast aluminum hub and are dynamically and statically balanced. The propeller shall have a streamlined hub cover and be attached to the shaft with a split taper lock bushing.

**MOTORS** — Direct drive units shall be supplied with motor wiring connections extended through liquid-tight conduit to outside the fan housing.

**BALANCING** — The propeller assembly shall be statically and dynamically balanced in accordance with ANSI/AMCA 204-96 "Balance Quality and Vibration Levels for Fans" to Fan Application Category BV-3, Balance Quality Grade G6.3. In addition, direct drive fan propellers shall be balanced on the motor shaft after final assembly in the fan casing, in the manufacturing facility, to the following peak velocity values, filter-in, at the fan test speed:

Fan Application Category	Rigidly Mounted (in./s)	Flexibly Mounted (in./s)
BV-3	0.15	0.20

**FINISH** — The units, after fabrication, shall be cleaned and chemically pretreated by a phosphatizing process and shall be painted inside and outside with an alkyd primer and finish painted with an air dry enamel. Fan shall be coated with the following optional finish:

- |  |   |
|--|---|
| <input type="checkbox"/> Epoxy Paint                         | <input type="checkbox"/> Plasite 7122 Epoxy Phenolic Force Cured, 10 mils |
| <input type="checkbox"/> Hot Dip Galvanizing                 | <input type="checkbox"/> Plasite 4310 Vinyl Ester Coating, 25-28 mils     |
| <input type="checkbox"/> Powder Coat (Farboil)               | <input type="checkbox"/> Plasite 9500 (Baked Epoxy Phenolic, 1246)        |
| <input type="checkbox"/> Carbocoat 30 (replaces Sanitile)    | <input type="checkbox"/> Heresite P413 (Baked Phenolic, 3055/3066)        |
| <input type="checkbox"/> Heresite VR504 (Air Dried Phenolic) |   |

**SOUND POWER LEVELS** — Sound power level of fan(s) shall not exceed:  
Octave Band-CPS (Sound Power  $10^{-12}$ ).

63	125	250	500	1000	2000	4000	8000

**ACCESSORIES** — Unit shall be furnished completed with:

- |   |   |
|---|---|
| <input type="checkbox"/> OSHA Type Inlet Guard  | <input type="checkbox"/> Propeller Access Section |
| <input type="checkbox"/> OSHA Type Outlet Guard   | <input type="checkbox"/> Inlet Bell               |
| <input type="checkbox"/> Companion Flanges (Steel) (Aluminum) (Stainless Steel)         | <input type="checkbox"/> Inlet Cone               |
| <input type="checkbox"/> Support Legs – Horizontal                                      | <input type="checkbox"/> Outlet Cone              |
| <input type="checkbox"/> Vertical Mounting Clips  | <input type="checkbox"/> Inlet Vane Damper        |
| <input type="checkbox"/> Horizontal Ceiling Clips                                       | <input type="checkbox"/> Acoustical Silencer      |
| <input type="checkbox"/> Ceiling Mounted Vibration Isolators (Rubber-In-Shear) (Spring) | <input type="checkbox"/> Stack Cap                |
| <input type="checkbox"/> Floor Mounted Vibration Isolators (Rubber-In-Shear) (Spring)   | <input type="checkbox"/> Curb Base                |
| <input type="checkbox"/> Swing-out Arrangement (to size 48")                            |   |

## Belt Driven Type "W" Vaneaxial Fans

Vaneaxial fans, where indicated on drawings and schedules, shall be Belt Driven Type W as manufactured by Aerovent, Minneapolis, Minnesota and shall be of the size and capacity as indicated in the fan schedule. Type W vaneaxial fans shall be rated based on tests and procedures performed in accordance with AMCA Publication 211 and shall comply with the requirements of the AMCA Certified Ratings Program. The Type W fans shall be guaranteed by the manufacturer to deliver at the rated published performance levels. In addition, each unit shall be factory run tested prior to shipment.

**CONSTRUCTION** — All fan housings shall have heavy-gauge steel, continuously welded seam construction. Flanges on sizes 25" through 84" shall be integrally rolled from the fan housing. Flanges on all sizes of aluminum construction shall be angle ring construction. Flanges shall be designed to ensure housing concentricity, housing strength and permit duct mounting. Guide vanes shall be integrally welded with the outer housing and shall be designed to provide for maximum efficiency and pressure capabilities. A motor base plate shall be welded to the outside of the fan housing. Fan shall be constructed of the following optional metal — Aluminum, Stainless Steel 304, Stainless Steel 316.

**IMPELLER** — The propeller shall be of SC64D cast aluminum with adjustable blades that are attached to a SC64D cast aluminum hub and are dynamically and statically balanced. The propeller shall have a streamlined hub cover and be attached to the shaft with a split taper lock bushing.

**BEARINGS** — Type W belt driven units shall be supplied with sealed pillow block type bearings with grease line brought forward to the outside of the unit for ease of servicing. Sheaves are cast iron with static conducting belts. Bearings and belts are enclosed in an air insulated housing for protection.

**DRIVE** — All drive selections on Type W belt driven fans shall be designed with a 1.2 service factor, unless otherwise specified. Sheaves shall be cast iron with static conducting belts. Belt adjustment shall be accomplished with an adjustable motor slide rail base.

**MOTORS** — Belt driven fan motors shall be NEMA Design B, standard industrial, continuous duty, ball bearing, variable torque and shall be provided with the enclosure type, voltage, phase and hertz as listed in the fan schedule.

**BALANCING** — The propeller assembly shall be statically and dynamically balanced in accordance with ANSI/AMCA 204-96 "Balance Quality and Vibration Levels for Fans" to Fan Application Category BV-3, Balance Quality Grade G6.3. In addition, belt driven fan propellers shall be balanced on the fan shaft after final assembly in the fan casing, in the manufacturing facility, to the following peak velocity values, filter-in, at the fan test speed:

Fan Application Category	Rigidly Mounted (in./s)	Flexibly Mounted (in./s)
BV-3	0.15	0.20

**FINISH** — The units, after fabrication, shall be cleaned and chemically pretreated by a phosphatizing process and shall be painted inside and outside with an alkyd primer and finish painted with an air dry enamel. Fan shall be coated with the following optional finish:

- |  |   |
|--|---|
| <input type="checkbox"/> Epoxy Paint                         | <input type="checkbox"/> Plasite 7122 Epoxy Phenolic Force Cured, 10 mils |
| <input type="checkbox"/> Hot Dip Galvanizing                 | <input type="checkbox"/> Plasite 4310 Vinyl Ester Coating, 25-28 mils     |
| <input type="checkbox"/> Powder Coat (Farboil)               | <input type="checkbox"/> Plasite 9500 (Baked Epoxy Phenolic, 1246)        |
| <input type="checkbox"/> Carbocoat 30 (replaces Sanitile)    | <input type="checkbox"/> Heresite P413 (Baked Phenolic, 3055/3066)        |
| <input type="checkbox"/> Heresite VR504 (Air Dried Phenolic) |   |
