Overview

FSR | FSWD | FSWB

Model FSR

FSR

The Aerovent model FSR is a roof mounted, axial flow, belted, filtered supply fan featuring Aerovent's Macheta® propeller. The FSR is specially designed with a steel hood that is well above the roofline, so it will not pick up undesirable hot air from other exhausters or from heat radiating off the roof.

A sturdy steel construction assures frame rigidity, allowing close tolerance between propeller tips and orifice, a must for optimum performance. A specially curved orifice design eliminates turbulence and produces a smooth flow of air which increases the fan's operating efficiency.

Each FSR unit features an L4 cast aluminum airfoil propeller. The high air moving capacity of the Type L Macheta® propeller allows the fan to operate at reduced speeds to meet low noise requirements. For access to the propeller the hood can be unbolted and removed.

The filters contained in this unit can be cleaned or changed without removing the hood. All units are furnished with aluminum, washable type filters. Disposable filters are also available.

Motor operated shutters and a fan disconnect switch are optional items for roof mounted units. Optional coatings, all aluminum and all galvanized constructions are also available.

Sizes

24 to 60 inch impeller diameters

Performance

Airflow to 49,300 CFM

Static pressure to 0.75 inches w.g.

FSR Unit with Optional Motor Operated Dampers

AEROVENT 
INDUSTRIAL VENTILATION SYSTEMS

FSWD/FSWB - Filtered Air Supply Fan

The Aerovent Wall Mounted Filtered Air Supply is an axial flow fan designed for supplying filtered air wherever it is required.

These modular constructed steel units are predrilled for ease of assembly. Each unit consists of a V-bank filter cabinet and a fan section.

The fan section includes a direct drive or belted panel fan and is supplied with a 17" x 22" gasketed access opening. Other panel fans may be selected for use based on 1/8" pressure drop for a face velocity of 520 feet per minute.

The filter cabinet contains aluminum multi-velocity permanent industrial type filters. Disposable filters are available. A filter removal door is supplied.

Sizes

24 to 60 inch impeller diameters

Performance

Airflow to 52,600 CFM

Static pressure to 1 inch w.g.

Options include

- Directional discharge grille
- Inlet weatherhood with bird screen
- PMS outlet guard
- Predrilled discharge flange
- Motor operated center pivoted shutter
- Flat inlet bird screen (no weatherhood on inlet)

Model FSWB

Model Nomenclature

To identify a specific fan for ordering or engineering specification, it is necessary to show the complete catalog number. Performance data is available in curve form upon request. Capacities shown in the performance tables are for standard air conditions: 70°F at sea level (0.075 lbs./cu. ft. air density).

Note 1: Specify fan model as FSR (Roof Mounted Filtered Air Supply), FSWD (Direct Drive Wall Mounted Filtered Air Supply) or FSWB (Belted Wall Mounted Filtered Air Supply).

24 L 4 22 See Note 1 1107 1/3

Dimensions given are in inches unless otherwise noted.

Dimensions are not to be used for construction.

*Max. CFM thru filters based on 520 feet per minute.

R-14047-00D

Model FSR

Roof mounted, filtered supply, axial flow fans are specially designed with a steel hood that is far enough above the roof line that it will not pick up undesirable hot air from other exhausters or from heat radiating off the roof. A sturdy steel construction assures frame rigidity, allowing close tolerance between propeller tips and orifice, a must for optimum performance. A specially curved orifice design eliminates turbulence and produces a smooth flow of air which increases the fan's operating efficiency.

CONSTRUCTION — The filters contained in this unit can be cleaned or changed without removing the hood. All units are furnished with aluminum multi-velocity permanent industrial type filters. Disposable filters are also available.

For access to the propeller, the hood can be unbolted and removed.

Fan shall be constructed of the following optional metal:

- Aluminum
- Hot Dipped Galvanized
- Stainless Steel 304
- Stainless Steel 316

PROPELLERS — Each FSR unit features an L4 cast aluminum airfoil propeller. The high air moving capacity of the Macheta propeller allows the fan to be belted down to operate at speeds lower than standard cataloged RPMs, assuring quieter operation.

BEARINGS — All belted propeller fans are to be supplied with sealed pillow block bearings. Bearings shall have a minimum L-10 life as defined by AFBMA of at least 20,000 hours (100,000 hours average life). External grease fittings with extended grease lines shall be supplied for lubrication of the pillow block bearings. Sheaves shall be cast iron with static conducting belts. The adjustment of the belt tension is accomplished with an adjustable motor base.

MOTORS — Belt driven fan motors shall be NEMA Design B, standard industrial, continuous duty (ODP/TEFC/FCXP), ball bearing, variable torque and shall be provided with the enclosure type, voltage, phase and hertz as listed in the fan schedule. If motors have regreaseable bearings, external grease fittings with extended grease lines shall be supplied for lubrication of the motor bearings.

BALANCING — The propeller assembly shall be statically and dynamically balanced in accordance with ANSI / AMCA 204 - 96 "Balance Quality and Vibration Levels for Fans" To Fan Application Category BV - 3, Balance Quality Grade G6.3. In addition, belt driven fan propellers shall be balanced on their fan shaft after final assembly in the fan casing, in the manufacturing facility, to the following peak velocity values, filter - in, at the fan test speed:

Fan Application Category	Rigidly Mounted (in./s)	Flexibly Mounted (in./s)
BV-3	0.15	0.20

FINISH — The unit, after fabrication, shall be cleaned and chemically pretreated by a phosphatizing process and shall be painted inside and outside with an air dry enamel.

OPTIONAL COATINGS —

- Air Dry Epoxy
- Asphalt Based Coating
- Carbolene 3358 / Sanitile 550 - Carbolene Primer
- Sanitile Finish

The following coatings require a sandblast metal preparation before applying:

- Plasite 4310 - Vinyl Ester
- Plasite 7122L - Air Dry Epoxy Phenolic
- Heresite VR506 - Air Dry Epoxy Phenolic
- Plasite 3070 - Baked Phenolic
- Farboil - Baked Aromatic Epoxy

ACCESSORIES — Units shall be complete with:

- Motor Operated Shutter
- Disconnect Switch
- Bird Screen
- Prefabricated Curb

Model

FSWD

Direct Drive, Wall Mounted, Filtered, Air Supply fans, where indicated on drawings and schedules, shall be model FSWD, as manufactured by Aerovent, Minneapolis, Minnesota, and shall be designed for supplying filtered air wherever it is required. The fans shall be of the size and capacity indicated in the fan schedule. Model FSWD fans shall be tested and certified with industry test codes and shall be guaranteed by the manufacturer to deliver at the rated published performance levels. In addition, each unit shall be factory run tested prior to shipment.

Performance shall be based on 520 feet per minute through clean filters.

CONSTRUCTION — These modular constructed steel units are predrilled for ease of assembly. Each unit consists of a V-bank filtered cabinet and a fan section. The fan section shall include a direct drive panel fan and supplied with a 17" x 22" gasketed access opening.

Other panel fans may be selected for use based on 1/8" pressure drop for a face velocity of 520 feet per minute. The filter cabinet shall contain aluminum multi-velocity permanent industrial type filters. Disposable filters are available. A filter door shall be supplied.

PROPELLERS — Precision "Macheta" tipped airfoil fan blades and hub shall be cast of A319 aluminum alloy. The propeller shall be mounted directly on the motor shaft with a split taper lock bushing on all sizes.

MOTOR — Fan motors shall be foot-mounted NEMA Design B, standard industrial, continuous duty, ball bearing, variable torque type suitable for operation on voltage, phase and hertz as listed in the fan schedule. Motor bearings shall have a minimum L-10 life, as defined by AFBMA, of at least 40,000 hours (200,000 hours average life).

BALANCING — The propeller assembly shall be statically and dynamically balanced in accordance with ANSI / AMCA 204 - 96 "Balance Quality and Vibration Levels for Fans" To Fan Application Category BV - 3, Balance Quality Grade G6.3. In addition, direct drive fan propellers shall be balanced on the motor shaft after final assembly in the fan casing, in the manufacturing facility, to the following peak velocity values, filter - in, at the fan test speed:

Fan Application Category	Rigidly Mounted (in./s)	Flexibly Mounted (in./s)
BV-3	0.15	0.20

FINISH — The unit, after fabrication, shall be cleaned and chemically pretreated by a phosphatizing process and shall be painted inside and outside with an air dry enamel.

OPTIONAL COATINGS —

- Air Dry Epoxy
- High Temperature Aluminum
- Asphalt Based Coating
- Carbolene 3358 / Sanitile 550 - Carbolene Primer Sanitile Finish

The following coatings require a sandblast metal preparation before applying:

- Plasite 4310 - Vinyl Ester
- Plasite 7122L - Air Dry Epoxy Phenolic
- Heresite VR506 - Air Dry Epoxy Phenolic
- Plasite 3070 - Baked Phenolic
- Farboil - Baked Aromatic Epoxy

ACCESSORIES — Units shall be complete with:

- Directional discharge grille
- Inlet weatherhood with bird screen
- PMS outlet guard
- Predrilled discharge flange
- Motor operated center pivoted shutter
- Flat inlet bird screen (no weatherhood on inlet)

Model FSWB

Belted, Wall Mounted, Filtered, Air Supply fans, where indicated on drawings and schedules, shall be model FSWB, as manufactured by Aerovent, Minneapolis, Minnesota, and shall be designed for supplying filtered air wherever it is required. The fans shall be of the size and capacity indicated in the fan schedule. Model FSWB fans shall be tested and certified with industry test codes and shall be guaranteed by the manufacturer to deliver at the rated published performance levels. In addition, each unit shall be factory run tested prior to shipment.

Performance shall be based on 520 feet per minute through clean filters.

CONSTRUCTION — These modular constructed steel units are predrilled for ease of assembly. Each unit consists of a V-bank filtered cabinet and a fan section. The fan section shall include a belted panel fan and supplied with a 17" x 22" gasketed access opening.

Other panel fans may be selected for use based on 1/8" pressure drop for a face velocity of 520 feet per minute. The filter cabinet shall contain aluminum multi-velocity permanent industrial type filters. Disposable filters are available. A filter door shall be supplied.

BEARINGS — All FSWD fans are to be supplied with sealed pillow block bearings. The bearings shall have a minimum L-10 life as defined by AFBMA of at least 20,000 hours (100,000 hours average life).

MOTOR — Fan motors shall be foot-mounted NEMA Design B, standard industrial, continuous duty, ball bearing (ODP/TEAO/TEFC/FCXP), variable torque type suitable for operation on voltage, phase and hertz as listed in the fan schedule. Motor bearings shall have a minimum L-10 life, as defined by AFBMA, of at least 40,000 hours (200,000 hours average life).

DRIVE — All drive selections on FSWB fans shall be designed with a 1.4 service factor unless otherwise specified. Sheaves shall be cast iron with static conducting belts. The adjustment of the belt tension is accomplished with an adjustable motor base.

BALANCING — The propeller assembly shall be statically and dynamically balanced in accordance with ANSI / AMCA 204-96 "Balance Quality and Vibration Levels for Fans" to Fan Application Category BV - 3, Balance Quality Grade G6.3. In addition, belt driven fan propellers shall be balanced on the fan shaft after final assembly in the fan casing, in the manufacturing facility, to the following peak velocity values, filter-in, at the fan test speed:

Fan Application Category	Rigidly Mounted (in./s)	Flexibly Mounted (in./s)
BV-3	0.15	0.20

FINISH — The unit, after fabrication, shall be cleaned and chemically pretreated by a phosphatizing process and shall be painted inside and outside with an air dry enamel.

OPTIONAL COATINGS —

- Air Dry Epoxy
- High Temperature Aluminum Sanitile
- Asphalt Based Coating
- Carbolene 3358 / Sanitile 550 - Carbolene Primer Finish

The following coatings require a sandblast metal preparation before applying:

- Plasite 4310 - Vinyl Ester
- Plasite 7122L - Air Dry Epoxy Phenolic
- Heresite VR506 - Air Dry Epoxy Phenolic
- Plasite 3070 - Baked Phenolic
- Farboil - Baked Aromatic Epoxy

ACCESSORIES — Units shall be complete with:

- Directional discharge grille
- Inlet weatherhood with bird screen
- PMS outlet guard
- Predrilled discharge flange
- Motor operated center pivoted shutter
- Flat inlet bird screen (no weatherhood on inlet)
