

Make-Up Air: Achieving Your Operational Goals

Air Make-Up Units (AMUs) increase safety, improve productivity and reduce operational costs.

Safety

AMUs positively pressurize your facility, **increasing exhaust fan flow up to 7%** and improving air quality for employees and guests. They also eliminate door slam to **reduce total recordable incident rate (TRIR).**

Productivity

The improved air flow **reduces unplanned absenteeism by an estimated 12%.*** Positive building pressure also keep insects out of your process.

Competitiveness

Safety and productivity **reduce variable overhead and G&A spending.** A typical 100% outside air Aerovent AMU has a 12-month return on investment and a 30-year design life expectancy.

*Top Work-Related Injury Causes:

Responsibility

Ever shut down production while your AMU supplier and exhaust fan supplier decide who will solve your air balance issue? **Trust Aerovent to be your single source of support for reliable AMUs and exhaust fans.**

Surprised by delays during new equipment start-up? **Aerovent AMUs include factory-certified commissioning as standard.**
